Hewlett Packard Enterprise (HPE) sets very stringent quality standards for all products to ensure they meet customers' high quality expectations. With a proven track record of achieving strict targets, the HPE Renew Program remanufacturing process ensures that all products are certified to be a true reflection of new HPE products. This Certificate of Quality assures that HPE Renew products are fully restored to original product specifications and backed by same-as-new factory warranty.

The HPE Renew promise

The vast majority of HPE Renew products are sourced from the HPE Demo Program equipment or from factory excess, and are typically less than 12 months of age.

With HPE Renew products, you can rest assured, knowing you are getting the same high-quality and performance that comes with new products.

All HPE Renew products have undergone comprehensive remanufacturing and testing processes in Hewlett Packard Enterprise factories, ensuring they are fully restored to meet HPE certified standards. It is only then that they qualify for original same-as-new factory warranty—your mark of HPE quality and reliability.

Warranty Statement

The warranty period for an HPE Renew product is the same as for a new product.

The warranty of the HPE Renew product starts with the date of purchase and refreshes the full original warranty. It is important to note that this is not a remaining warranty policy.

HPE Renew products are covered by the original service and support, and can be bundled with the same additional options as a new product.

How to identify a genuine HPE Renew product

HPE Renew products can be recognized by the addition of an "R" to the HPE product number.

For example, if the new product number is A1234A, the equivalent HPE Renew product number will be A1234AR.

This is proof that the product has completed the rigorous HPE Renew remanufacturing process and is covered by the original same-as-new factory warranty and technical support.
